Progress presentation

2026

Pre-processing

- Local variables
- Lazily unfolding
- Removes while, if then else and seq

Feasibility

- Done by calculating the wlp of the prefix
- Same simplification steps and calls to z3 as the wlp of an entire path
- No heuristics yet

WLP and checking of it

- Working for all the minimum requirements
- Simplification function is called until the wlp remains the same
- More improvements will be added
- Z3 calls and conversion

Demo

Output

- Incorrect paths are shown
- No metrics yet
