

Line: mean over runs; band: mean ± std. Axis is $\log_{10}(1+x)$. Solid: $Q = 1$; dashed: $Q = 16$.

Figure 1: Feasibility checks and formula length as a function of k.

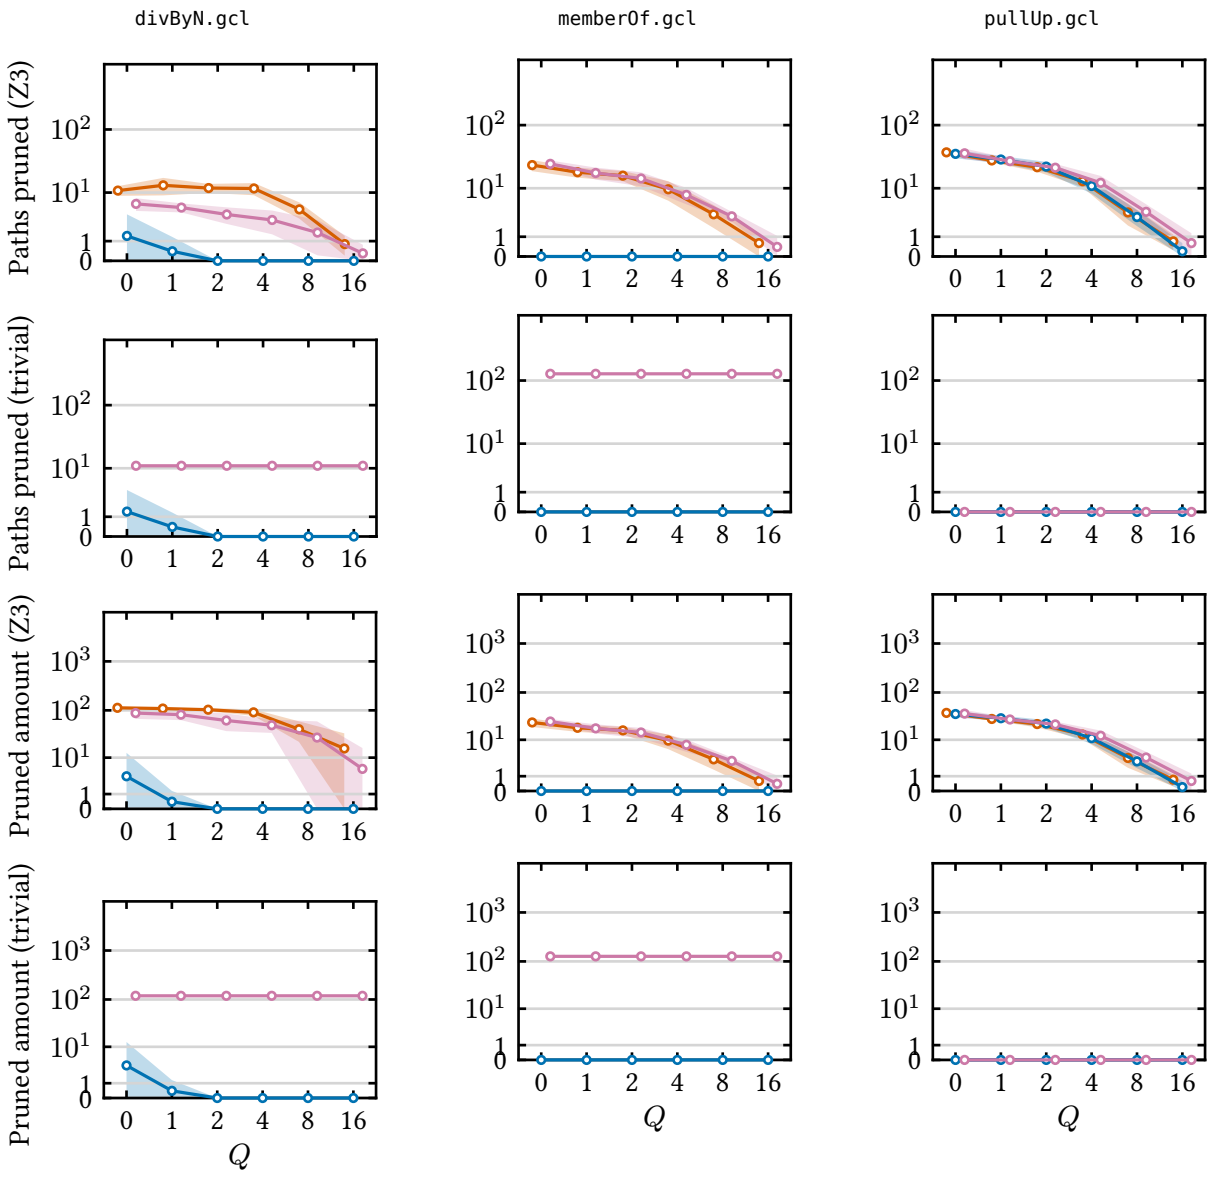

Line: mean over runs; band: mean ± std. Axis is $\log_{10}(1+x)$. Solid: $Q = 1$; dashed: $Q = 16$.

Figure 2: Pruning as a function of k.

Line: mean over runs; band: mean ± std. Axis is $\log_{10}(1+x)$. $k = 30$.

Figure 3: Feasibility checks and formula length as a function of Q ($k = 30$).

Line: mean over runs; band: mean ± std. Axis is $\log_{10}(1+x)$. $k = 30$.

Figure 4: Pruning as a function of Q ($k = 30$).
